Machine Events

Machine Events Data Flow

Segnals Acquisition

A2 - Processes signals of the machines

For each combination machine, the system manages a series of **threshold** and **times** that allow to understand the state of machine.

Then system for each machine has 4 states:

- Production
- Slowdown
- Starting
- Stop

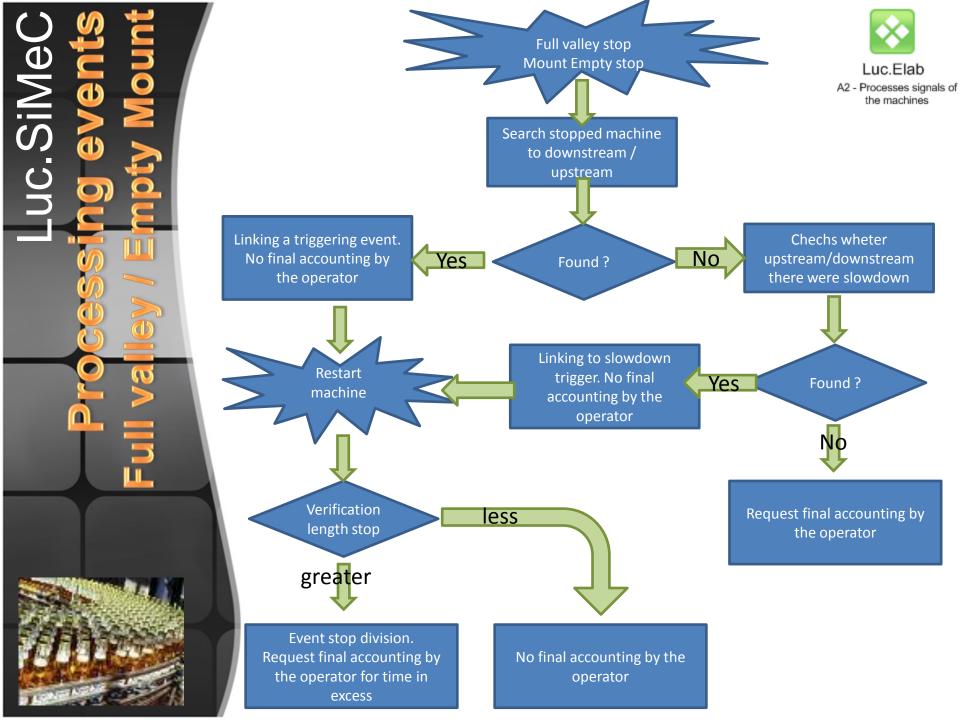

Stop Classification

The stops are automatically classified in:

- Stop
- Microstop

Depending on the duration

Machine Events

Stops Summarizing
Operator and Maintainer

Stops Summarizing - Operator

The operator displays the list of stops must be itemized

The Operator selects one or more stops and makes the final accounting

Stops Summarizing - Operator

Stops Summarizing - Manteiner

Maintainer displays the stops where he spoke

The maintainer selects the stop and issuing the final accounting

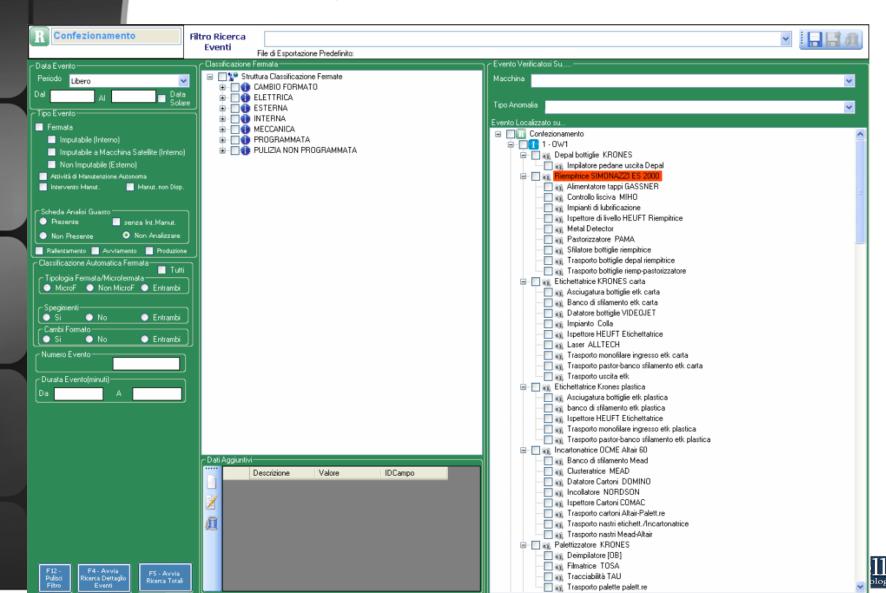

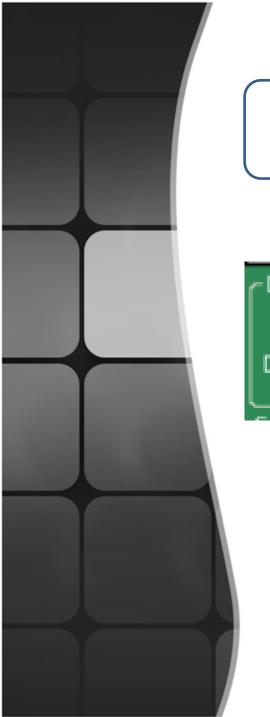

Machine Events

Events Analisys

The system provides a tools to pull out the events that occured to perform the analisys. All data can be exported in excel files

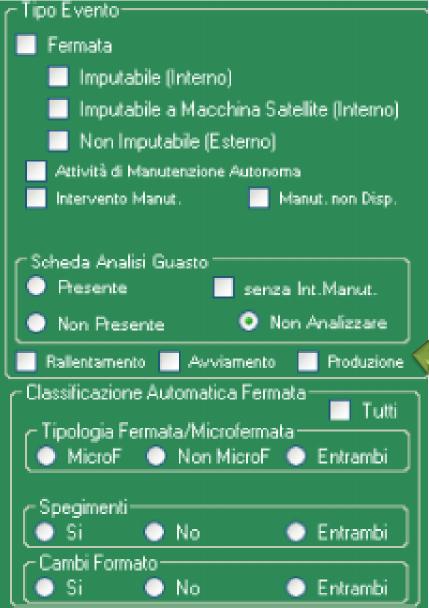

Period during which the event occured

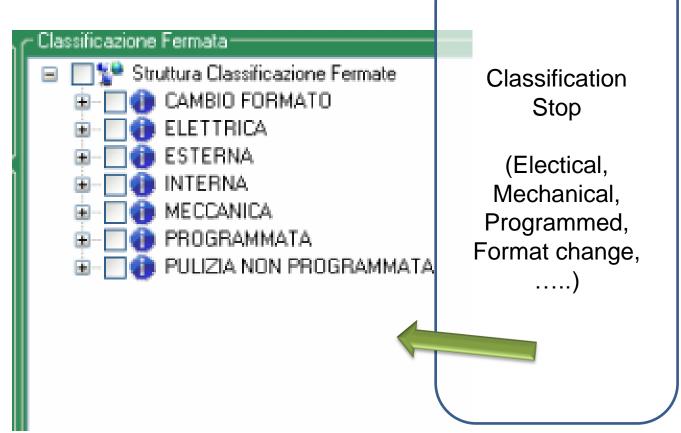

Event Type (Micro stop, internal stop, External stop, Slowdown, Starting, Production,
